

MRI

PATIENT PREPARATION INSTRUCTIONS

MRI Procedures	Patient Preparation	Approximate Length of Procedure
All MRI Procedures including MR Arthrograms, but excluding Enterography	No diet or medication restrictions. Please leave all jewelry at home. If claustrophobic please call your doctor for a prescription of anti-anxiety medication. Some implants are not MRI compatible, a detailed medical history must be provided upon arrival.	The length of procedures including preparation time can be between 60 and 90 minutes.
Abdomen with Gadolinium Enterography	No medication restrictions. Take only clear fluids from 5pm the day before e.g. soup broth, coffee, tea – no cream or milk. No breakfast except clear fluids. Please leave all jewelry at home. If claustrophobic please call your doctor for a prescription of anti-anxiety medication. Some implants are not MRI compatible, a detailed medical history must be provided upon arrival.	60 Minutes Preparation time 30 Minutes scanning time

Commented [DM1]: Except for Abdomen with Gadolinium Enterography, all patient preparation are the same. Strongly advise you consider listing MRI procedures in one column and include only one patient preparation description. Include a separate area for the abdomen with gadolinium enterography.
For approximate procedure times, include a general description line such as "the length of procedures including preparation time can be between 60 and 90 minutes."
